# Technical Assessment - Solution Analyst

Studi Kasus: Aplikasi Pinjaman Online PT. XYZ

## 1. High level design architecture

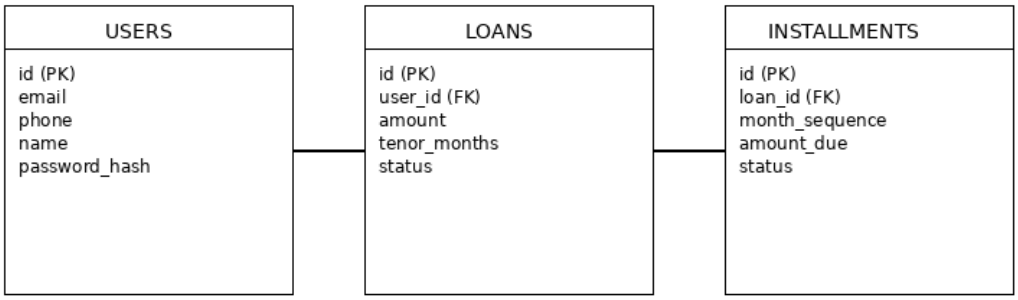

Arsitektur menggunakan Microservices Architecture. Client, API Gateway, Microservices (Auth, User, Loan, Notif), dan Data Layer terhubung sebagaimana diagram di atas.

# 2. Screen Flow

Flow dimulai dari Splash Screen menuju form Login/Register, masuk ke Dashboard, lalu ke form pengajuan jika memenuhi syarat validasi.

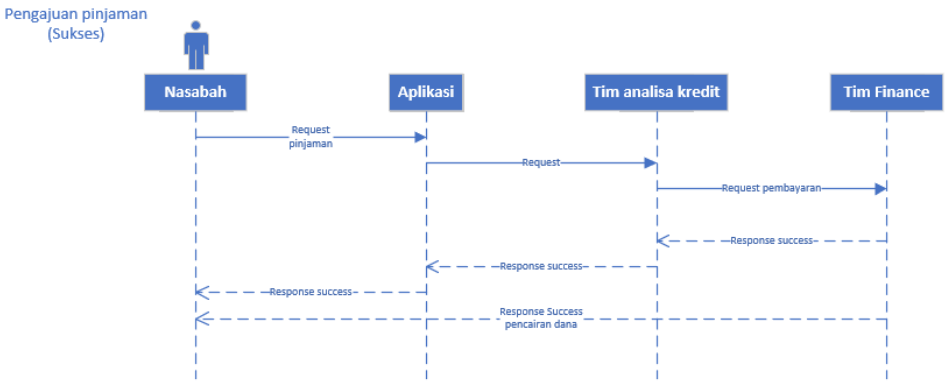

- Entity Relationship Diagram (ERD)

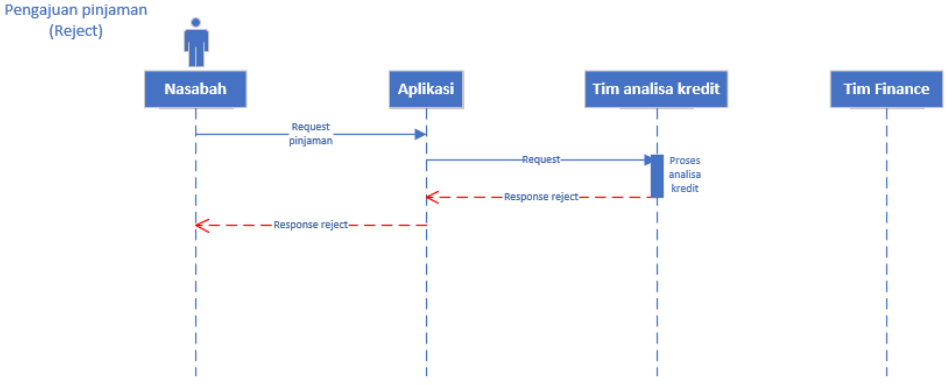

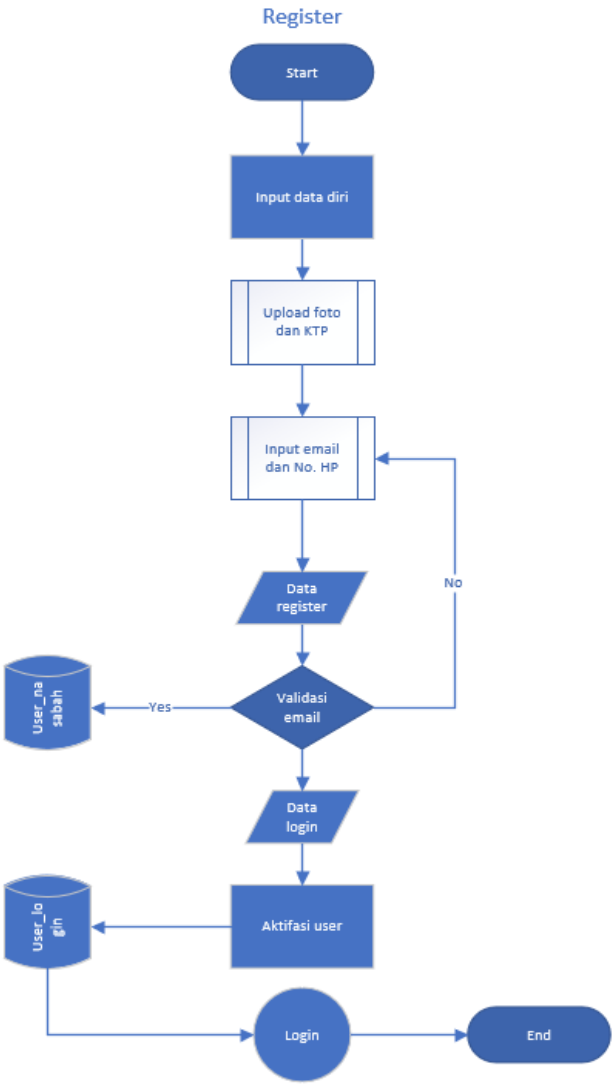

# 3. Detail Design API

Desain komunikasi backend:

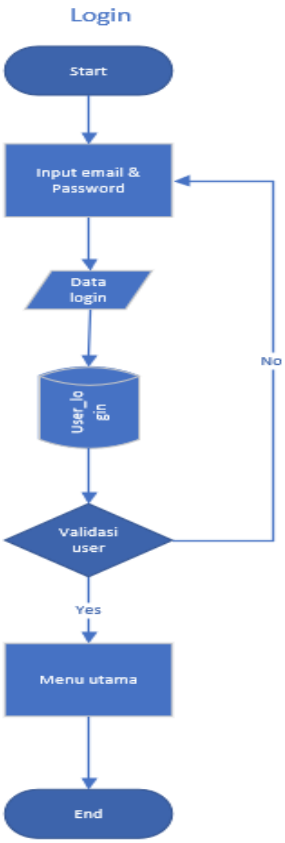

| | |
|---|---|
| POST /api/v1/loans/apply | { "amount": 12000000, "tenor_months": 12 } |
| GET /api/v1/loans/dashboard | Returns outstanding & active tags |

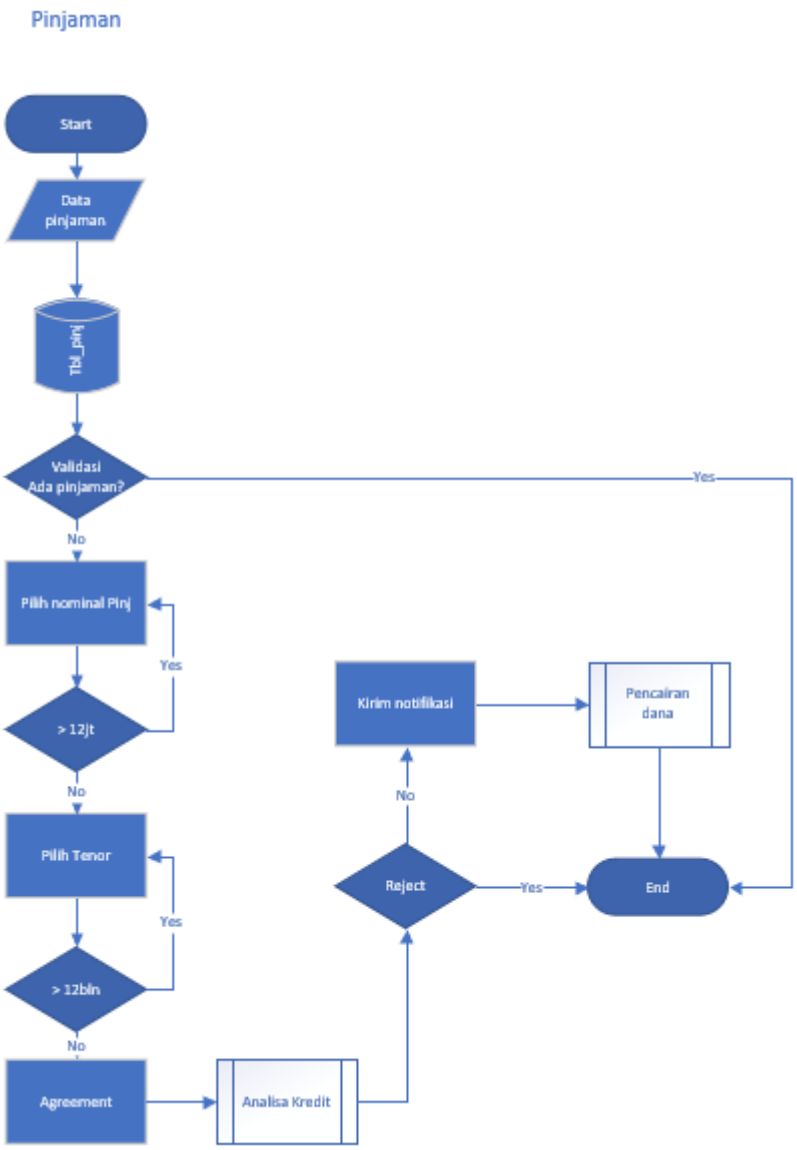

- Start
- Input data diri
- Upload foto & KTP (subprocess)
- Input email dan no. hp
- Validasi email, apakah sudah terdaftar?
- Insert user_nasabah
- Aktifasi user
- Inser user_login
- Login
- End

- Start
- Input username & password
- Validasi username
- Proses menu utama
- End

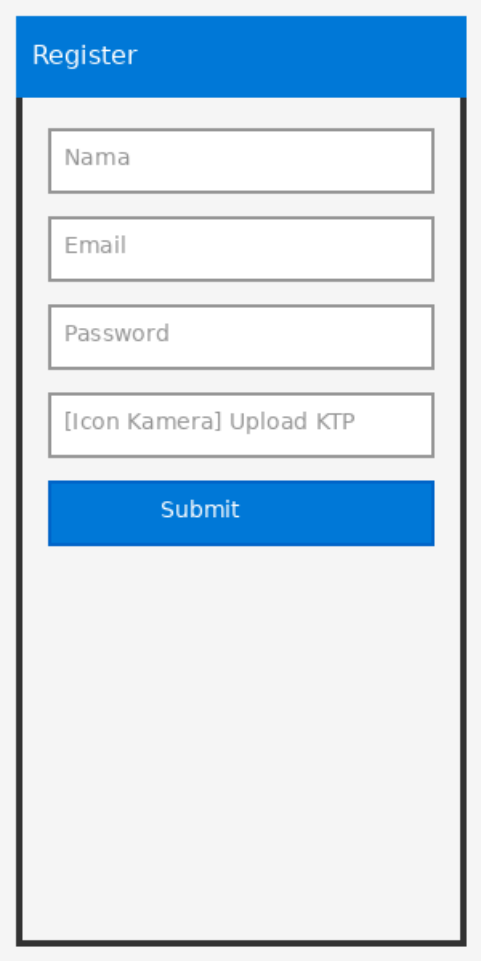

- Start
- Validasi ada pinjaman?
- Yes, tidak bisa mengajukan pinjaman
- No, pilih nominal pinjaman
- Validasi nominal > Rp.12jt
- Pilih tenor
- Validasi tenor > 12 bulan
- Agreement
- Analisa kredit (subprocess)
- Reject ?
- Yes, tidak bisa mengajukan pinjaman
- No, kirim notifkasi email / no. Hp
- Pencairan dana (subprocess)
- End

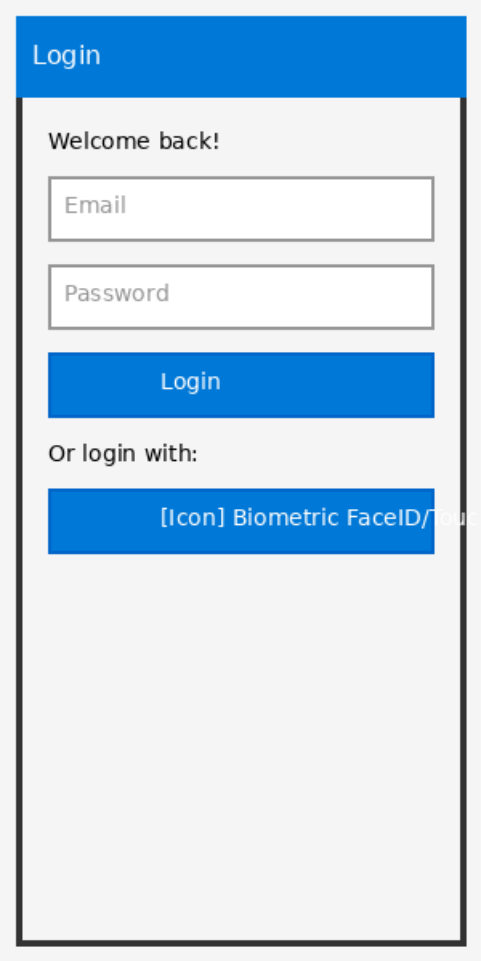

# 4. Detail Design Screen Behavior (wireframe)

Berikut adalah gambaran kasar wireframe untuk tiap screen:

Register Screen

Login Screen

Home Dashboard

Loan Submission

Dashboard
Halo, Budi!
SISA HUTANG:
Rp 5.000.000
TAGIHAN BULAN INI:
Rp 1.000.000
Ajukan Pinjaman (Disable)

Loan Submit
Simulasi Pinjaman
Nominal: Rp 12.000.000
Tenor: 12 Bulan
ESTIMASI CICILAN:
Pokok: Rp 1.000.000
Bunga: Rp 100.000
Total: Rp 1.100.000 / bulan
Kirim Pengajuan
